

Fracture Mechanics Investigation of Adhesive Interfacial Interactions of Polyethylene Stretch Wrap Films

Mirko Rennert

Table of Content

Abstract	III
Zusammenfassung	IV
Table of Content	V
List of Abbreviations	VIII
List of Symbols	X
1 Introduction and Motivation	1
2 Fundamentals of Stretch Film Technology	5
2.1 Deduction of Transport Safety Requirements on Stretch Film Properties	5
2.2 Mechanical and Cling Properties of Polyethylene Stretch Films – Macroscopic Scale of Length	8
2.2.1 Characteristic of Adhesive Peel Films and Autohesion	8
2.2.2 Practical Adhesion of Thin Peel Films	10
2.2.3 Structure–Property Relationships of Ethylene/ α -olefin Copolymers	12
2.2.4 Cling Components	16
2.2.5 Influence of Branching Content on the Three-Phase Morphology and Fracture Process of Semi-Crystalline Linear Polyethylene	17
2.2.6 Influence of Cast Extrusion Process Parameters on the Cling Behavior	19
2.2.7 Influence of Stretching and Wrapping Process on the Cling Behavior	23
2.3 Interfacial Interactions and Surface Topography – Microscopic and Mesoscopic Scale of Length	26
2.4 Fundamental Adhesion and Molecular Interactions – Nanoscopic Scale of Length	28
2.4.1 Mechanical Interlocking (Interdigitation)	28
2.4.2 Adsorption Theory and Chemical Bridging	29
2.4.3 Electrostatic Theory	29
2.4.4 Interdiffusion and Entanglements	30
2.4.5 Weak Boundary Layers	33
3 Experimental Characterization of Stretch Films	35

3.1	Materials and Coextruded Film Structure	35
3.1.1	Bulk Materials and Cling Components	35
3.1.2	Cast Coextrusion Film Process	36
3.1.3	Mechanical Properties of the Multilayer Stretch Film	38
3.2	Analytical Investigations of the Materials and Morphology of the Film	41
3.2.1	Attenuated Total Reflectance Infrared Spectroscopy	41
3.2.2	Nuclear Magnetic Resonance Spectroscopy	42
3.2.3	Atomic Force Microscopy	42
3.2.4	Fast Scanning Calorimetry	42
3.2.5	High-Temperature Gel Permeation Chromatography	43
3.2.6	Contact Angle Measurement	43
3.3	Characterization of Interfacial Interactions and Cling Strength as Resistance Against Crack Initiation and Propagation	44
3.3.1	Implementation and Evaluation of Peel Tests	44
3.3.2	Influence of Testing Parameters on the Cling Properties	48
3.3.3	Characterization of the Peel Initiation and Propagation Behavior Using Quasi-Static Fracture Mechanics Models	54
4	Results and Discussion of the Experimental Film Investigations	59
4.1	Influence of Structure and Processing on Stretch Film Properties	59
4.2	Results of the Interfacial Characterization with Fracture Mechanics Models	65
4.2.1	Cling Layer Variation – Influence of Recipe and Processing on Adhesive Properties in Unstretched Condition	65
4.2.2	Influence of Prestretching on the Surface Morphology and Adhesion	76
4.3	Peel Process – Fracture Mechanics Characterization	83
4.3.1	Influence of the Peel Angle on the Adhesive Fracture Energy	83
4.3.2	Influence of Cling Layer Composition on the Peel Propagation Behavior	84
4.4	Adhesive Zone model for Identification of Traction Separation Curves	87
4.5	Application-Technological Conclusions of the Stretch Film Results	96
5	Summary and Outlook	100
